Knowing Children Gary A. Fine 1988-09 To help the researcher understand why and how children react to adults who are doing ethnographic research, Fine and Sandstrom explore the methodological and ethical problems of qualitative research with minors. They correct numerous fallacies held by researchers that children think like adults and that they cannot hide their thoughts and feelings from adults, especially strangers. Recognizing that age is an important determinant of children’s response, they discuss problems and present strategies for conducting research with three age groups of children: preschool children (4 to 6 year olds), preadolescents (10 to 12) and middle adolescents (14 to 16). This is the first major methodological statement on doing participant observation work

Income and Democracy Anke Hoeffler 2012-12-17 We revisit Lipset’s law, which posits a positive and significant relationship between income and democracy. Using dynamic and heterogeneous panel data estimation techniques, we find a significant and negative relationship between income and democracy: higher/lower incomes per capita hinder/trigger democratization. Decomposing overall income per capita into its resource and non-resource components, we find that the coefficient on the latter is positive and significant while that on the former is significant but negative, indicating that the role of resource income is central to the result.

This book opens with his last poetic composition The Veiled Suite: The Collected Poems, a canzone, which was published posthumously. He had penned this poem a year prior to his death. This book contains some of his famous poems like Postcard from Kashmir, A Lost Memory of Delhi, Snowmen, Cracked Portraits, Story of a Silence, Poets on Bathroom Walls, Now No Longer Little, Medusa, The Blessed Word: A prologue, Some Visions of the World Cashmere, New Delhi Airport, I have Loved, and many more remarkable poems. The Book of L G. Rozenberg 2012-12-06 This book is dedicated to Aristid Lindenmayer on the occasion of his 60th birthday on November 17, 1985. Contributions range from mathematics and theoretical computer science to biology. Aristid Lindenmayer introduced language-theoretic models for developmental biology in 1968. Since then the models have been cus tomarily referred to as L systems. Lindenmayer’s invention turned out to be one of the most beautifl examples of interdisciplinary science: work in one area (developmental biology) induces most fruitful ideas in other areas (theory of formal languages and automata, and formal power series). As evident from the articles and references in this book, the in terest in L systems is continuously growing. For newcomers the first contact with L systems usually happens via the most basic class of L systems, namely, DOL systems. Here "0" stands for zero context between developing cells. It has been a major typographical problem that printers are unable to distinguish between 0 (zero) and 0 (oh). Thus, DOL was almost always printed with "oh" rather than "zero", and also pronounced that way. However, this misunderstanding turned out to be very fortunate. The wrong spelling "DOL" of "DOL" could be read in the suggestive way: DO L Indeed, hundreds of researchers have followed this suggestion. Some of them appear as contributors to this book. Of the many who could not contribute, we in particular regret the absence of A. Ehrenfeucht, G. Herman and H.A. Maurer whose influence in the theory of L systems has been most significant.
