other forms of organization and especially its peculiarities in relation to entrepreneurship. Focusing on small and medium-sized second-generation Chinese family businesses this book provides an in-depth analysis on the relationship between the firms' family attributes – or “familiness” as conceptualized in this book – and entrepreneurial processes, which leads to different outcomes. Eight cases from China are presented in this book and a dual-level approach is proposed for research on entrepreneurship in family businesses, emphasising both firm processes and the role of individual owner-managers.

Readers will also find several useful policy and practice-oriented perspectives in this book.

Langelier 2001-01-09 "Designed to be used in classroom guidance programs as well as individual or group counseling, the Mood Management program provides

adolescents with an opportunity to help one another "steer clear" of emotional traffic jams. The Leader's Manual is a valuable asset to the program, providing a brief introduction to the program, the complete text of the Skills Workbook, answers to workbook questions, masters for overhead transparencies, and a guide to the transparencies. Combined with the Skills Workbook, this is a complete program ready for immediate use." "The Mood Management program is perfect for two audiences. Community Health Care's O-  
Process for Evaluation Fannie  
Fonseca-Becker 2008-03-28

There is a renewed sense of urgency to alleviate human suffering and public attention has increased its focus on corporate philanthropy and social investing. Likewise, non-profit organizations find themselves under greater pressure to demonstrate impact and the demand for greater 'transparency' on the donor community and government agencies now require a more transparent accounting of spending on social programs that support the disenfranchised. This book is

intended to be a guide for Community Health Care Programs interested in enhancing their long-term sustainability through the appropriate use of their evaluation results. The book has been designed for ease of use and provides step-by-step guidance on all aspects of basic evaluation methods. For the last twenty years, The Johnson & Johnson Community Health Care Program has awarded funding to more than 150 pioneering non-profit organizations for unique projects that address disparities in America's delivery of health care to poor and underserved citizens. By supporting

essential, community-based health care organizations, the program helps to break down health care barriers for medically underserved populations by improving their access to quality services.

**Evidence-Based Health Care Management** Thomas T.H. Wan  
2012-12-06 Evidence-Based Health Care Management introduces the principles and methods for drawing sound causal inferences in research on health services management. The emphasis is on the application of structural equation modeling techniques

and other analytical methods to develop causal models in health care management. Topics include causality, theoretical model building, and model verification. Multivariate modeling approaches and their applications in health care management are illustrated. The primary goals of the book are to present advanced principles of health services management research and to familiarize students with the multivariate analytic methods and procedures now in use in scientific research on health care management. The hope is to help health care managers become better equipped to use causal modeling techniques for

problem solving and decision making. Evidence-based knowledge is derived from scientific replication and verification of facts. Used consistently and appropriately, it enables a health care manager to improve organizational performance. Causal inference in health care management is a highly feasible approach to establishing evidence-based knowledge that can help navigate an organization to high performance. This book introduces the principles and methods for drawing causal inferences in research on health services management.

Hoffmann 2017-07-03 -The world is saturated with data. We are regularly presented with

data in words, tables, and graphics. Students from many academic fields are now expected to be educated about data in one form or another. Yet the typical sequence of courses--introductory statistics and research methods--does not provide sufficient information about data, learning to work with data sets, or how to present data to various audiences. This book is designed for these purposes. It discusses how data are used in research projects, where to get data, how to manage them with software, and how to present them so that one's message comes through clearly. With few expectations beyond some

familiarity with basic statistics and research methods, this book provides a comprehensive set of principles for understanding and using data as part of a research project--- Provided by publisher.
